Statement of Reasons for Allowance

1. Claims 8, 10-12, 14-15, 17-19 and 21 are allowed.
2. The following is an examiner's statement of reasons for allowance.

The present invention is directed towards deployment of customized software by post-load images, where a server has post-load images stored for various custom combinations of software and hardware, where a user indicates to a server the user's client hardware and desired software applications, and where a server responsively delivers the selected combination in the form of a post-load image, including drivers and other system operating parameters.

Independent Claims 8 and 15 recite, or similarly recite, in combination with the remaining elements,

receiving from the user a selection of software applications for deploying to a target computer system;

receiving from a user a selection of hardware for the target computer system and responsively determining what drivers correspond to the selected hardware, wherein the first computer system has a pre-built array of post-load images

stored thereon for combinations of hardware and the software applications that the user may select, the post-load images being substantially identical to respective images resulting on a target computer system hard drive from an installation process of corresponding pre-load images, so that the respective post-load images include software application configuration information, files from the corresponding pre-load images, and links to drivers for hardware of the target computer system;

sending the selected image, the image being limited to the selected pre-built, post-load image.

The closest prior arts, Cheng et al. ("Cheng", US 6,151,643 A1) teach, a system and method to update client computers of various end users with software updates for software products installed on the client computers, the software products manufactured by diverse, unrelated software vendors, but do not explicitly teach updating from a pre-built post-load image, and sending only the pre-built post-load image. Similarly, Hsieh, Vivian G. et al. ("Hsieh", US 20020158900 A1) teach, software programs can be packaged in a fixed format, sometimes referred to as a "ghost" (post-load), and automatically disseminated to all of the appropriate computers. However, this type of automated deployment is not effective for situations in which computers, such as servers, need to be customized to accommodate the individual requirements of varied users, and as such teaches away from combining with Cheng.

Hence, Cheng or Hisieh, singularly or in combination, still fail to anticipate or render the above cited limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
